

SAMPLE PREPARATION

FL-0161

FLEC Paint & Coatings Test Plates, 5 pcs

Overview

The FL-0161 Test Plates are designed for preparing paint and coating samples with a defined surface area and application thickness. A laminated foil defines the coating thickness and its circular opening defines the test area. Apply approximately 2 ml of material and distribute it with the FL-0160 Application Roller, then remove the foil. The low plate weight and defined area also make gravimetric checks practical.

Technical overview

Product code	FL-0161
Quantity	5 test plates
Sample application	Approximately 2 ml, distributed with the FL-0160 roller
Test area	Defined by the opening in the laminated foil
Coating thickness	Defined by the laminated foil

Related equipment

FL-0001 FLEC Cell

FL-0160 FLEC Application Roller
